

Claims

1.

A microwave oven comprising:

a cavity in which food is loaded; and

an upper duct having a main body mounted in the cavity, a duct fixing member formed on a side of the main body and fixed on a wall of the cavity, and an inclined portion extending from an end of the main body and inclined at a predetermined angle.

2.

The microwave oven according to claim 1, wherein the upper duct is formed of synthetic resin material.

3.

The microwave oven according to claim 1, wherein the duct fixing member includes a hook step formed on a front portion of the upper duct.

4.

The microwave oven according to claim 1, wherein the duct fixing member includes a hook step extending from an end of the inclined portion to allow the upper duct to be fixed on the front wall of the cavity.

5.

The microwave oven according to claim 1, wherein the duct fixing member includes one or more fixing projections extending from a rear end of the upper duct.

6.

The microwave oven according to claim 1, wherein the duct fixing member includes one or more fixing projections extending from a rear end of the upper duct to allow the

upper duct to be fixed on a rear wall of the cavity.

7.

The microwave oven according to claim 1, wherein the
5 duct fixing member is integrally formed with the main body.

8.

The microwave oven according to claim 1, wherein the
inclined portion is provided with one or more grasping
10 portions a user can grasp.

9.

The microwave oven according to claim 1, wherein the
cavity is provided at a rear wall with an insertion groove in
15 which the duct fixing member can be inserted.

10.

The microwave oven according to claim 1, wherein the
cavity is provided at a front wall with an insertion groove
20 in which the duct fixing member can be inserted.

11.

A microwave oven comprising:

a cavity defining a food heating space;

25 a door for opening and closing a front wall of the
cavity; and

an upper duct including a main body mounted in the
cavity and an air curtain forming unit for preventing steam
generated in the course of heating the food from contacting
30 the door.

12.

The microwave oven according to claim 11, wherein the
air curtain forming unit is formed on a front portion of the
35 upper duct.

13.

The microwave oven according to claim 11, wherein the air curtain forming unit comprising:

5 one or more air-guide holes each formed in a rectangular shape; and

an air-guide for directing air at a predetermined inclined angle into the cavity through the air-guide holes.

10 14.

The microwave oven according to claim 11, wherein the air curtain forming unit comprising:

an air-guide hole through which air is directed into the cavity; and

15 an air-guide formed around the air-guide hole and extending downward, the air-guide being inclined rearward of the cavity.

15.

20 The microwave oven according to claim 14, wherein the air-guide has a \sqsubset -shaped section.

16.

25 The microwave oven according to claim 15, wherein the upper duct is detachably mounted on a top of the cavity.

17.

An upper duct of a microwave oven, comprising:

30 a duct main body detachably mounted in a cavity of the microwave oven;

a duct fixing member for fixing the duct main body on the cavity, the duct fixing member including a hook step formed on a front portion of the duct main body and a fixing projection formed on a rear portion of the duct main body;

35 an inclined portion extending from a front end of the

duct main body at a predetermined inclined angle; and

an air curtain forming unit formed on an end of the duct main body, the air curtain forming unit including an air-guide hole through which outer air is directed into the cavity and an air-guide for directing the air from the air-guide hole rearward of the cavity, the air-guide having a C-shaped section.

18.

The upper duct according to claim 17, wherein the inclined portion is provided with one or more grasping portion a user can grasp.

19.

The upper duct according to claim 17, wherein the inclined portion is provided with one or more blowing holes through which outer air is directed into the cavity.

20.

An upper duct of a microwave oven having a cavity and a door for opening and closing an opening of the cavity, the upper duct comprising:

a duct main body mounted on a top of the cavity;

a duct fixing portion formed on a flange portion of the duct main body; and

an air curtain forming unit formed on an end of the duct main body to prevent water drops from forming on the door,

wherein the upper duct is mounted by inserting a hook step in a front wall of the cavity after inserting a fixing projection in a rear wall of the cavity and is dismounted by removing the fixing projection from the rear wall of the cavity after the hook step is removed from the front wall of the cavity.
